

CLOUD SERVICE

REMOTE ACCESS

The easiest way to stay online.

Cloud Service is reliable, secure and simple way to connect remotely (over the Internet) to your vessel equipped with Yacht Router. Cloud Service is available for all Yacht Router models (Micro, Mini, Standard and Pro). You can use Cloud service with your smartphone, tablet or computer.

Why Cloud Service?

With Cloud Service you can easily establish remote connection (over the Internet) to navigation (MFD) and control systems, cameras, NMEA2000 networks or any other IP based devices.

Example.

If you connect e.g. B&G multifunctional display (MFD) to Yacht Router you will be able to use B&G Link app (Android/iPhone/iPad) locally over WIFI. You do not have to connect directly to a WIFI transmitted by B&G MFD anymore. It means that internet will be accessible on your phone (from Yacht Router WIFI) and at the same time you will be able to access B&G plotter with B&G Link app. Moreover, B&G will have internet access from Yacht Router too, so you can easily download GIB files or make chart or system update.

Cloud service is tested with following systems:

Simple to use.

When you want to connect remotely to e.g. B&G MFD, first you will connect your smartphone, tablet or computer to Yacht Router Cloud and then you will use B&G Link app the same way you are using it locally on your boat. Now, you can enjoy dinner at the restaurant with greater peace of mind, knowing that you can easily check your boat position, depth or wind speed or even check boat cameras.

Choosing a route.

When you are connecting remotely to devices on your boat via Cloud Service, you can choose Internet connection route that you want to use. **That is very important!** Example: when you are connecting remotely to your vessel cameras, you want to be sure that you are not connecting via expensive Inmarsat or Iridium satellite connection. Instead, you will choose to connect via 3G/4G/5G or WIFI connection.
